DESIGNED AUF ST. PAULI

## STRAIGHT FROM ST. PAULI

It's not important how you look, what you wear or which language you speak. The key is who you really are, what you are made of, what you feel and whether you stand by your convictions. St. Pauli is a magnet for contradictions. Innovation and tradition, perfection and improvisation, prudence and passion come together to create a vibrant, hypnotic energy.

This creativity and energy is what drives us. We think outside the box, we do things differently, we may seem a little rough around the edges, but we're always sincere and possibly a little crazy. We'll always stick together, come what may. We're honest, courageous, open and stand by what we say and do.

Our dedication knows neither time of day nor time of year. It engrosses us completely. We're devoted to what we do. We work as one, ride our bikes in all conditions, we party, laugh, fight and cry together. Our love for all things cycling is boundless. This, in turn, reflects in our products: straight forward bikes. It's been this way for more than 20 years, and it will always be. Promise.

# CONTRAIL ALUMINIUM

## FOR EPIC ADVENTURES.

Unbridled riding pleasure was a high priority when developing the new CONTRAIL aluminium platform. With the optimised all-mountain geometry with 130 mm suspension travel, we were able to push the boundaries of the 29" full suspension bike even further. Countless features like the geometry neutral modification to 27.5+ wheels ensure that the CONTRAIL ALUMINIUM is armed and ready for any terrain, making it the perfect bike for enthusiasts and adventure seekers. The clear design and angular look highlight the uncompromising commitment to limitless riding pleasure.

# REVOX CARBON

## FOR THE FAST AND THE FURIOUS.

Always full throttle! Meet the 4th generation REVOX: even more agile, aggressive, playful and precise. The geometry of the purebred cross country racer has been completely re-worked, and now has a longer reach, flatter steering angle, reduced standover height and shorter chainstays making the bike even more agile and bringing maximum control and smoothness in the high speed range. The new and improved appearance in a clear angular design reflects the consistent reworking of the 29" Carbon Race Hardtail.

# GRANDURANCE

## ROADS ARE WHAT YOU MAKE THEM.

The GRANDURANCE is redefining the meaning of "street". Countless smart detail solutions and tyre clearance of up to 37 mm transform the all-road machines from high-end carbon road racers into purebred gravel racers or even full-fledged cyclocrossers. For adventurers and globe-trotters: The integrated attachment options make the GRANDURANCE the perfect travel companion. The tried and tested carbon platform was enhanced with two aluminium variants with the same features. All models include an optional insert, which ensures perfect form closure in the fork area despite the most diverse tyre dimensions. The fractal, avantgarde design makes the GRANDURANCE a real eye-catcher and completely unique.

# HORIZON & VITNESS

## ALL DAY. EVERY DAY. FUN DAY.

The bikes from the VITNESS and HORIZON range help you to escape from dreary everyday life, be it on your daily commute to work or on an extended tour. The newly developed, elegant aluminium frame with optimised geometric design uniquely combines dynamics and comfort, enabling a sporty and yet still maximum upright sitting position.

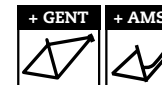

The innovative ergonomics concept as well as the high-quality, safe and reliable attachments ensure unalloyed riding pleasure. The elegantly integrated, light aluminium rigid fork gives the Vitess range a strictly sporty character with direct and agile steering. The Horizon models, on the other hand, are equipped with suspension forks and optimised for comfort.

# SWEEP

## MARK YOUR DISTRICT.

The SWEEP makes a statement as it glides through urban areas. Racing bike genes combined with urban features make the bike a dynamic and trustworthy companion in the urban jungle.

The newly developed aluminium platform is impressive, with sporty and yet still comfortable geometry. The SWEEP proclaims its origins from St. Pauli, with its consistent and non-conformist design. The striking fork design is a typographic homage to the Critical Mass movement, which stands for more rights and improved infrastructure for cycling in urban areas all over the world.

# BOSCH E-BIKE SYSTEMS 2018

## PERFORMANCE LINE CX / EMTB MODUS

With a maximum torque of 75 Nm, the **Performance Line CX** is the ideal drive for ambitious sports enthusiasts and demanding eBikers. In eMTB mode, the rider receives the required power – always precisely at the right moment. From Tour to Turbo – experience up to 300% of perfectly delivered support, incredible dynamism and unique grip. Depending on the pedal pressure, the progressive motor support automatically adapts to the individual riding style.

## ACTIVE LINE PLUS & ACTIVE LINE

The new **Active Line Plus** with up to 50 Nm offers pure riding enjoyment and a natural riding experience. The quiet, small yet powerful drive unit is the best in its class and offers a significant plus in riding enjoyment, as well as improved handling due to its low weight and reduced size. The innovative drive concept allows a very light motor weight of only approx. 3.2 kg.

The new **Active Line** is the smallest, lightest and most elegant system in the Bosch eBike family. With up to 40 Nm, the quiet drive unit provides just the right support for relaxed riding enjoyment up to a maximum of 25 km/h. Weighing only approx. 2.9 kg, the drive unit enables a reduced overall weight and simplifies the handling of the eBike. Both drive units are available with a backpedal function.

## POWERTUBE & STANDARD AKKU

Bosch batteries are an efficient, long-life energy source and the most state-of-the-art eBike batteries on the market. They combine impressive mileage performance, a long lifetime and low weight with an ergonomic design and simple handling. The high quality lithium-ion batteries have a battery management system that detects potential sources of error and protects cells from overloading.

The lightweight Li-Ion Bosch PowerPacks are easy to install and remove and can be charged on the eBike via the charging socket. With the **PowerTube 500**, Bosch sets new standards and presents a pared-down, timeless look coupled with sophisticated technology. Thanks to compact dimensions and minimalistic design, the lithium-ion batteries can be fully integrated into the bike frame. The battery is concealed and perfectly protected by the frame.

## MTB BOSCH PERFORMANCE LINE CX

The Performance Line CX drive unit is the ideal drive for offroad conditions. With its maximum torque of 75 Nm, the strong drive unit guarantees more riding enjoyment in the mountains.

**PERFORMANCE** 25 km/h

# E-REVOLUTION

## ONE IDEA, MANY FORMS

The BERGAMONT UNIVERSAL CHASSIS CONCEPT, which was the result of this process, is a revolutionary frame platform with many distinctive features. It offers a systematic basis for a range of models with diverse characteristics, from the E-MTB Hardtail to the E-Trekking Bike without losing any technical or structural features.

### THE E-VOLUTION.

The next level of evolution of the E-Horizon Wave Platform is setting benchmarks for integration, design and riding culture. At its core is the innovative, three-part box flange concept. It allows the new Bosch Active Line Drive Unit to be completely integrated into the frame design. No compromises when it comes to handling, safety and riding characteristics: the new flange concept creates space for a wider step-through, and at the same time, the frame construction is extremely torsion-resistant while also being exceptionally comfortable. The weight distribution of the drive unit and the battery, which is balanced to the greatest degree possible, ensures that this step-through bicycle has outstanding stability.

# TECHNOLOGY ROCKS.

## FLIP CHIP GEOMETRY FITTING

The Flip Chip is a small device found on both sides of the shock mount which can be fitted in two directions. Changing the orientation of the Flip Chip alters the frames geometry: you'll have either a steeper head angle for technical terrain where more agility is needed or a slacker head angle for a more stable ride on fast descents.

## DFS DIRECTIONAL FLEX SYSTEM

With DFS, the seat stays are specially shaped and fulfill several functions. The middle part of the seat stays has a transverse-oval shape and offers vertical flex, thus more comfort. At the same time, this design leads to more lateral stiffness, which means increased directional stability of the frame.

## PLS PROGRESSIVE LINK SYSTEM

The frame's kinematics are designed to always allow the suspension to work as effectively as possible in all riding conditions. At the beginning of travel the rear end has a very high leverage ratio, meaning that a larger lever is working the shock and thereby guarantees a very sensitive feel to the suspension.

## LCG LOW CENTER OF GRAVITY

LCG stands for the dedication of BERGAMONT engineers to achieve the lowest possible center of gravity in a bike. This is ultimately achieved when the heavy components of the frame (swing arms, bearings, rear shock) are centrally located as close to the geometrical center as possible and above the bottom bracket. The lower the center of gravity is, the better is the handling of a bike.

## CPS COAX PIVOT SYSTEM

The coaxial positioning of the rear link bracket around the rear axle provides maximum decoupling of the suspension and brakes. The Coax Pivot System provides neutral braking without brake judder and nega-

tive influence on the suspension. Conversely, the suspension works independently of the brake. Advantages: less weight, more stiffness and grip.

## CFS CLEVER FENDER SOLUTION

To adapt the fork to different tire sizes and to add functionality, we created the Clever Fender Solution which features either a Mini-Fender or a fork insert that can easily be exchanged. When using wide tires you can opt to run either the Mini-Fender for basic spray-protection or no cover at all. Running on narrow tires you can opt for an insert to adjust the fork design to the tire size.

## ADJUSTABLE CHAINSTAY LENGTH

The length of the chainstay can be adjusted to a short or long setting via a small insert that can be mounted in different orientations. Changing the orientation requires you to take out the rear wheel and flip the insert in both drop-outs so the axle bores both point either forward (short setting) or rearward (long setting). Adjusting your chainstay to the shorter setting means more agility while the long setting provides a more stable ride and is especially suited for high-speed tracks.

## CEC CLEVER ENGINE COVER

Our ambition to make good things even better led us to design our very own, unique motor housing and bash guard for our e-bikes. It's pleasing to the eye and also a major design feature. The motor now fits seamlessly into our bikes' design and the impact-resistant and glass fiber reinforced bash guard doubles as a cable guide which makes maintenance a lot easier.

## Di2 READY

Keeping your options is key when you mean to progress in training and racing. Making a frame Di2 ready is a bet on the future that is sure to pay out. Even if electronic shifting might not be an option for you today, tomorrow may look very different. Be Di2 Ready.

## FEM FINITE ELEMENT METHOD

To simulate and analyze individual frame components even before the first samples are fabricated, the BERGAMONT engineers use the latest FEM computer software. Components can be tested and optimized for static and dynamic loads way in advance. There is no more trial and error, only precise mathematical calculation. This guarantees the best possible safety of the resulting products while greatly reducing developing times.

## BXF BOX FLANGE CONCEPT

As a central frame element the Box Flange simultaneously eliminates several constructional weaknesses of low-entry frames. On the one hand the frames stiffness is significantly increased and on the other hand BERGAMONT'S engineers have enough room to integrate the battery into the seat tube. The combined effect of these changes is an improved handling and a more stable bike, which means a safer ride.

## UNIVERSAL CHASSIS CONCEPT

We always made an extra effort when creating frame geometries and features to achieve superior riding capabilities. Using this knowledge we created a universal e-bike frame platform that perfectly integrates modern batteries and drive units. Using the same basic construction throughout our range means making premium features available on almost any level.

## THREE PIECE BOX FLANGE CONCEPT

Using cutting edge technology shows us what is possible. Evolving this technology means making it available to more people. While the original BERGAMONT Box Flange is cast and machined as a single piece of aluminium, the Three Piece Box Flange is constructed from three forged parts. Providing the same structural integrity and faster turn over while cutting down on cost.

# DRESS FOR SUCCESS.

## 3L RAIN JACKET

The BERGAMONT 3L Rain Jacket is the perfect outdoor companion. The DRYOsphere material is breathable and protects you from wind and rain. Thanks to the face shield integrated into the hood your face is always protected. Ventilation is regulated via laser-cut zippers. Many pockets store all your gear.

## SOFTSHELL JACKET

Thanks to the high-end mix of stretch and DRYOsphere material the BERGAMONT Softshell Jacket not only protects you from the elements, it is also comfortable to wear. The jacket also features laser-cut ventilation ports, an internal breast pocket and reflective details for maximum visibility in the dark.

## LOGO HOODY

For cold days and cool evenings the BERGAMONT Logo Hoody is just right.

## TEAM BEANIE

sports a large logo print and not only keeps you warm, it's also the perfect accessory for your outfit.

## HAMBURG BEANIE

will even keep you warm in northern Germany. A little understatement is just part of the lifestyle.

## BGM CAP

is a timeless classic. Mesh inserts and adjustability make it comfortable to wear.

## WOMEN'S INSULATOR JACKET

A lightweight and warm jacket for all year round. The BERGAMONT Women's Insulator Jacket padded with 40 g PrimaLoft® is perfect to keep you from cooling down when resting on those chill summer days or warm you during winter activities.

## RACE SHIRT

The BERGAMONT Race Shirt has a full-length zipper and mesh inserts for optimal ventilation. Of the three back pockets one is water repellent.

## RACE BIBSHORT

The BERGAMONT Race Bibshort features a high quality chamois for MTB and road use. Silicon grippers on the hem keep everything in place and mesh inserts keep you cool. The fabric also protects from UV rays.

## TRAIL SHIRT

is a comfortably fitted short sleeve jersey for MTB riding or touring.

## TRAIL SHORT

is perfect for MTB riding or touring. The short features an inner short with chamois. Practical pockets and stretch inserts make it comfortable to wear.
